

A web-based tool to help people living with dementia and their caregivers

Are you a family caregiver for a person living with dementia? The **WeCareAdvisor Study** may be right for you!

The WeCareAdvisor is an innovative tool developed by researchers at Drexel University and University of California, Davis to help family caregivers manage common behavioral and psychological symptoms of dementia like anger, irritability, asking repeated questions, pacing, or refusing needed help.

The WeCareAdvisor walks caregivers through a step-by-step approach to understand why behaviors may be occurring, and to provide strategies that are customized to the situation that caregivers can use to manage the behaviors.

This study may be right for you if you are:

- 21 years of age or older
- Able to read, speak and understand English
- The **primary** caregiver for at least the past 6 months
- Currently managing challenging dementia-related behaviors
- Have an internet-capable device, such as a computer, tablet, or smartphone
- Have internet access

What should participants expect?

If this study is right for you, you will be asked to participate in an initial telephone interview of about 1 ½ hours in length. You will then be assigned by chance (randomly) to one of two groups, both of which will have access to WeCareAdvisor and receive daily tips, reminders, and educational materials.

For both groups, you will complete interviews three more times over six months. Participants will be compensated up to \$60 in Amazon gift cards for their time.

To see if this study is right for you and learn more about the study, please contact:
